

How Every Section Works

Functional guide & workflows — what each screen does, step by step

A plain-language companion to the technical documentation. For every role and screen: what you see, what you do, what happens, and the rules behind it.

Read this to understand the platform as a **user** and **operator**, not just a developer.

Document version 1.0

1. The Big Picture — how the platform "thinks"

VKM is a 4-month (default 16-week) business-transformation program delivered as software. The whole system revolves around one weekly rhythm repeated for each participant, supported by their coach and the mentor.

The weekly loop: Mentor teaches the "why" in Tuesday's live class → Participant applies that week's task to their real business → Participant submits **proof** → Coach reviews & approves (awards points) → Numbers, habits & recognition update everywhere → repeat next week.

Four roles experience this loop differently:

Participant — does the work

Coach — drives & verifies it

Mentor — teaches & oversees

Super Admin — runs operations

Golden rule of visibility: a participant sees only their own data; a coach sees only the participants **assigned** to them; a mentor and super-admin see everyone. This is enforced by the database itself, so the rule holds no matter how data is accessed.

2. Getting In — onboarding & first login

HOW A PERSON JOINS

1. A **Super Admin** invites them (one by one, or bulk via CSV) in **User Management**. This creates their account with a **temporary password** and a secure invite link that expires in 7 days, and assigns their role (participant / coach / mentor).
2. For participants, the invite can include a **Batch** (e.g. "Batch 16"). The system creates that batch if it's new, links the person to it, and gives them a public community profile.
3. The person opens the app, signs in with their email + temp password (or the invite link), and is **forced to set a new password** on first login.
4. They can also sign in with **Google** or request an **email OTP code** (if enabled by the admin).

What the participant does next: opens **Program Progress** and presses **Start my program**. That click is their Day 1 — the program clock begins for them personally.

3. The Participant Experience — section by section

3.1 Dashboard (home)

What you see: a greeting, your current week with a progress ring, your points / stage / milestones, and live cards.

Card	How it works
Program progress ring	Shows "Week X of N" and % complete based on <i>your</i> start date and the program length.
This Week task	The current week's topic, why, task and the proof you must submit. Button jumps to proof submission.
Today's Focus	Your real checklist for today (the same items you manage on the Focus page). Shows done/total.
Business KPIs	Revenue, Leads, Closing rate from your latest monthly numbers, with month-over-month change and a mini trend line. Updates when you post new numbers.
Leaderboard	Live top-5 of your cohort plus your own rank, computed from real points.
Milestones	Your 3 milestones and which are unlocked.
AI nudge / Class banner	A suggestion tied to your current week, and the upcoming Tuesday class topic.

3.2 Program Progress

Before you start: a "Start Program" screen explains the journey and previews the weeks. Pressing Start sets your Day 1.

After you start, three tabs:

- **Weekly Tasks** — every week as a card with its task and proof. The current week is highlighted; past weeks show their status (approved / in review / needs changes / missed); future weeks are locked until you reach them.
- **Your Journey** — a visual timeline across the program phases (Foundation → Systems → Sell → Review) with a "you are here" marker.
- **Curriculum** — the full week plan; can be exported to CSV.

Submitting proof: open the current week → add a link and/or upload files + a note → submit. It goes to your coach's review queue. You'll get a notification when it's approved, rejected, or sent back for changes.

A new week unlocks automatically every 7 days from your start date. If the admin adds weeks to the program, they appear for you too — measured from your own Day 1.

3.3 My Business

Your business "cockpit", organised into sections you can jump between: Overview, Profile, **Team**, Revenue, Leads, Sales, Performance, Analytics, Insights.

MONTHLY NUMBERS

Press **Update this month** to enter revenue, MRR, leads, deals, pipeline, closing rate, follow-up %, NPS, plus a win and a blocker. These are **coach-reviewed** and then power your trends, KPIs and points.

TEAM SECTION

- Top KPIs: headcount, active members, departments, monthly payroll.
- **Add member** → name, role, department, status (active/inactive), monthly salary, joined date, email, phone, notes.
- Edit or remove any member. The roster (and a "reported team size" comparison) is visible to your coach for context.

3.4 Habits & Focus

- **Habits** — tick daily habits (with optional proof), track steps, water, and workouts. Builds a streak; each ticked task can earn points.
- **Focus** — a deep-work timer (logs focus sessions) and "Today's Focus" checklist. Coaches can see your engagement.

3.5 Vision, Leaderboard, Milestones, Achievements

- **Vision** — write your 5-year north-star statement, add a mood board, and set dated goals across pillars (Revenue, Team, Product, Brand, Personal). Your #1 goal greets you on the dashboard with live progress.
- **Leaderboard** — full cohort ranking by points, with stage bands and filters.
- **Milestones / Achievements** — unlock Goal Setter → System Builder → Growth Champion as you progress; each carries a real reward.

3.6 AI Business Advisor

A private chat assistant trained on *your* Business Brain (your revenue, leads, team, goals). Ask it to plan your day, pressure-test a decision, or turn this week's task into concrete actions. The admin configures which AI model/key powers it; your conversations are saved to your own thread.

3.7 Community & Chat & Meetings

- **Community** — an opt-in member directory of peers; you control what's public. Start a 1:1 direct message with any member (realtime).
- **Chat** — a support conversation with your assigned coach (text + attachments, realtime).
- **Meetings** — join in-app Zoom calls your coach schedules, without leaving the platform.

4. The Coach Experience — section by section

Everything a coach sees is automatically limited to **their assigned participants**. An unassigned participant simply won't appear. Admins control assignments.

4.1 Participants overview

A list of your assigned participants with weeks completed, points, pending proofs, and an "at-risk" flag (behind schedule). Click anyone to open their full detail.

4.2 Participant detail (the coaching cockpit)

Block	How you use it
Personal + Business Brain	Their contact info and full business profile (industry, MRR, leads, closing rate, challenges, goals).
Team	Their team roster — size, roles, departments, payroll — for context when advising on hiring/structure.
Week-by-week program	Expand any week to see the submitted proof and Approve / Reject / leave a note.
Habits & engagement	Live signals: streaks, focus minutes, daily actions, water/steps/workouts.
Vision & goals	Their north-star and this year's goals, so coaching ties to what they want.
Coaching notes	A private 1:1 log (staff-only — participants never see it). Record what was covered and the next commitment.

4.3 Proof review queue

Workflow: open the queue → review each pending proof (link/files/note) → **Approve** (awards points, marks attended), **Reject**, or **Request changes** (keeps it pending and sends the participant your note). You can undo a decision, which reverts to pending and removes awarded points.

4.4 Cohort, performance, notes, tasks, notifications

- **Cohort overview** — a KPI grid across your assigned participants (MRR, points, weeks approved, pending proofs, activity).
- **Performance** — your own coaching metrics (reviews done, approval rate, turnaround time, participants).
- **Coaching notes** — your private log per participant.
- **Tasks** — your personal to-do list (owner-only).
- **Notify** — message your own participants; broadcasts are scoped to your batches.

5. The Mentor Experience

The mentor uses the **same screens as a coach** but with **org-wide reach**: all participants, all cohorts. The mentor (Venu Kalyan) also runs the weekly Tuesday class, manages programs and batches, and can broadcast announcements to the entire cohort. The participant detail view is the same shared cockpit coaches use.

6. The Super Admin Experience — operations

6.1 User Management (the control centre)

Action	How it works
Invite user	Create an account with role + optional batch; generates a temp password + 7-day secure link (emailed if a provider is set, else shown to copy).
Import CSV	Bulk-create users from a spreadsheet (name, email, role, phone, batch). Creates real batches and community profiles automatically.
Open a user	A detail drawer with three tabs: Performance (points, weeks, milestones, focus, MRR, team roster), Activity & login (last sign-in, member since, recent activity), Manage .
Assign / reassign coach	Pick a coach for any participant — inline in the table, in the drawer, or in bulk (tick many, choose a coach, Apply). The directory shows an "Assigned Coach" column. This is what controls coach visibility.
Move batch	Change a participant's batch; creates the batch if new and keeps everything in sync.
Reset password	Generate a new temporary password and force a reset on their next login.

6.2 Program Builder

Workflow: Admin → Academy → Program Builder. Press **Load default** to seed the standard 16-week curriculum, then **Add, Edit** (phase, mode, topic, why, task, proof) or **Delete** weeks. The program length is simply however many weeks you define (14, 18, 19...). Changes apply to every participant from their own start date.

6.3 Storage settings

Choose where uploaded files and class videos live: **Supabase Storage** (default) or **Cloudflare R2**. For R2, enter the bucket + S3 credentials + public URL; the secret stays server-side and uploads are signed by the platform. Switching providers only affects new uploads — existing files keep working.

6.4 Email / SMS / WhatsApp

Workflow: pick a provider (Email: Resend / MailerSend / Amazon SES / Zoho ZeptoMail), paste credentials, press **Save** (this turns it on automatically), then **Send test** to confirm. Use the toggle to switch a provider off later. Manage reusable message templates and turn on email-OTP login from the same area.

Before going live with email, verify your sending domain with the provider. Many providers (e.g. MailerSend trial, ZeptoMail) restrict sending until the domain/recipient is approved — the test button now shows the provider's exact error if something's wrong.

6.5 Other operations

System overview & analytics, reports, batches, coach assignment, security, and the VK-Ops workflows: admissions, payment verification, batch allocation, onboarding, welcome kit, gifts, graduation, alumni, stories, and more.

7. Cross-Cutting Systems — how they behave everywhere

POINTS & RECOGNITION

Points are awarded when a coach approves a weekly proof and when daily habits are ticked. Every award is recorded, totals drive your **stage** (Starter → Builder → Operator → Closer → Growth Champion) and your **leaderboard** rank. Undoing an approval removes its points.

NOTIFICATIONS

You get a notification (bell + page) when your proof is reviewed, a milestone unlocks, a task is assigned, or staff broadcast an announcement. Links open the relevant page. They're realtime and per-user.

CHAT & MEETINGS

Participant↔coach support chat and peer DMs are realtime. Meetings run in-app via Zoom; staff create them, and only the host/participant can join with a signed session.

FILES & MEDIA

Proof files, avatars, vision-board images and class videos all upload through one pipeline that routes to Supabase or R2 based on the admin setting.

8. End-to-End Scenarios

A WEEK IN A PARTICIPANT'S LIFE

1. Tuesday: attend the live class (the "why").
2. Work with the coach 1:1 to apply the task to their business.
3. Do the task; log daily habits and focus along the way.
4. Submit proof on Program Progress.

5. Coach approves → points land → dashboard, leaderboard and stage update.
6. Next week unlocks automatically 7 days after their start date.

ONBOARDING A NEW BATCH (ADMIN)

1. Import the batch via CSV (creates accounts + the batch + community profiles).
2. Assign each participant a coach (bulk-assign the whole batch to a coach in seconds).
3. Configure email so invites/OTP send; verify the domain.
4. Participants log in, reset passwords, and press Start to begin their clocks.

REASSIGNING A COACH

1. Admin opens the participant (or selects several) in User Management.
2. Picks a new coach from the dropdown and saves.
3. Instantly, the new coach sees that participant's full data and the old coach no longer does — because visibility follows the assignment.

CHANGING PROGRAM LENGTH

1. Admin opens Program Builder and adds or removes weeks.
2. Every participant's "Week X of N", progress and curriculum update to the new length, measured from each person's own start date.

9. What "good" looks like operationally

- Every participant has a coach assigned (otherwise coaches see an empty panel).
- Email provider verified and enabled, so invites and OTP codes deliver.
- The program plan reflects the current curriculum length.
- Storage provider chosen and (for R2) the bucket public/custom-domain configured.
- Google sign-in configured in Supabase if you offer it.

VK Mentorship — How Every Section Works v1.0 · Functional companion to the Technical Documentation. Describes the platform's behaviour and workflows as implemented.
