

Platform Changelog

A running log of platform updates. Newest first. Ask any time for a PDF of this list.

2026-07-02

NEW

- **Habit lists export to Excel & PDF**

in Coach! Participant Habits (list view), the Export menu now downloads a styled CSV with a header in the platform theme with a gold accent, and "Done" cells tinted green — and a themed PDF with a navy title bar, gold branding and per-habit '/' marks. (Alongside the existing PNG/JPG exports — nothing is stored.

FIXED

- **"At risk" no longer flags everyone**

the at-risk badge was comparing each participant against the wrong program week. It now uses each participant's own enrollment week and only flags someone from week 3 onwards when their completed weeks fall meaningfully behind.

IMPROVED

- **Community shows real business details**

the Member Network now auto-pulls each member's business name, industry, location, website, USP and logo straight from their My Business / business profile (only public, non-financial fields), instead of a separately typed copy. Member profiles show a richer Business card.

NEW

- **Batches, alumni & tiered access**

a real Batches admin page (Admin! Batches): create cohorts, set a batch's start/end, assign a coach (Name/email/phone! invites + auto-assigned to the batch), and mark a batch's status. A participant follows the cohort: active batch = full app; completed/archived batch = Community page only; alumni = Community + My Business + Support + Settings. Nav and routes adapt automatically to each participant's tier.

- **Coach Participant Habits, reworked**

same batch-first browsing as the Participants page: pick a batch, then a Grid! of participants (name/points/progress, an At risk filter), and open any participant's full live habit tracker. Now scoped to the coach's assigned participants (no coaches in the list).

- **Participant Leaderboard, reworked**

coaches/mentors/admins no longer appear (participants only); a My batch! Æ All batch! ranking, stats and a real cohort activity feed (from actual points earned). "View Points History" now opens a real Points History page — every XP entry grouped by day, a total/stage/top-source summary, and a per-source breakdown.

FIXED

- **Forgot password now works**

the sign-in "Forgot password?" link previously led to a page that required being logged in. It now runs a proper flow: enter your email! receive a 6-digit code! enter the code and a new password.

IMPROVED

- **Profile password change**

now verifies it's you first — enter a new password, receive an email code, confirm it, then the password updates.

NEW

- **Batch-wise program content**

class videos and per-week downloads/resources are now scoped to a batch's program. Admin/mentor pick a batch in Program Design, Program Builder, and Class Videos, then add that batch's videos and files (upload or link) per week. Participants automatically see only their batch's content, so a future Batch 17 can have different videos/resources from Batch 16 (which stays unchanged).

- **Installable App (PWA) settings**

a new Admin page (Admin! Installable App) to control the installed app's name, icon, and theme/splash colors, with a live home-screen + splash preview. Defaults match the current app, so nothing changes until edited.

- **Business logo**

owners can upload a business logo from either the Business profile settings or the My Business page; it's a single source of truth, so it reflects in both places automatically.

IMPROVED

- **Participants (coach / mentor / admin)**

reworked from one flat list into batch-wise browsing: pick a batch (Batch 16, 15, ... + Unassigned), then view its participants with a Grid/List toggle (grid by default, remembered), search, a

2026-07-01

NEW

- **Support tickets**

participants can raise support tickets (Participant! Support) to mentors/admins for questions, feedback, replies and attachments. New staff inboxes at Admin! Support and Mentor! Support. Can create, assign, and reply. Live notifications both ways.

- **Group meeting scheduler**

staff can schedule meetings (auto Zoom / custom link / in-person) inviting participants + coach + mentor + admin, with email invites, in-app calendar blocks, and notifications for everyone.

- **Branded video player**

a custom YouTube/JWPlayer-style player for HLS (.m3u8), MP4, and YouTube/Vimeo embeds, with quality selection, playback speed, resume-where-you-left-off, buffering states, keyboard shortcuts, and mobile rotate-to-fullscreen. Download and right-click save are disabled.

- **Staff "Log in as participant"**

coaches/mentors/admins can open a participant's app to help troubleshoot.

- **Cloudflare R2 storage**

made the default storage provider for all uploads.

IMPROVED

- **AI Business Advisor**

now answers with the owner's full live context (profile, revenue, monthly numbers, wins/blockers, coach notes, and program week) and replies in English, Telugu, or Tenglish to match how the owner writes. The "Business Brain" button now opens the My Business page; the whole page got a mobile/desktop polish.

- **Toasts redesigned**

bold, Duolingo-style success/error/info toasts, top-center on desktop and a full-width banner on mobile, with a success chime when a habit is marked done.

- **Media auto-compression**

images are compressed before upload (smaller files, faster on mobile data), applied everywhere uploads happen.

- **HEIC (iPhone) photos**

HEIC uploads are converted for universal display; previously-uploaded HEIC files are handled too.

- **User Management**
assign multiple coaches per participant, plus bulk email-resend and bulk batch-assign.
- **Habit & weekly proofs**
approve/reject on every proof type (weekly, daily habits, water, etc.); reviewed proofs move to History. Proofs open in an in-page lightbox with a Download button (no more new tabs).
- **Water tracker**
removed the 30-minute add lock; rapid logs now flag coaches/mentors/admins in notifications and the "Who needs attention" area.
- **Today's Focus & Habits**
compact mobile stat cards, correct per-participant program week, accurate "habits today" count, and removed the redundant Daily Habits card.
- **My Business**
the "Week X of 16" journey now tracks each participant's own start date, not the global cohort clock.
- **Affirmation habit**
proof is now optional; participants can simply "Mark as done" (still visible to staff).
- **Sign-in page**
the self-serve "Create account" tab is hidden (accounts are invite-provisioned).

FIXED

- **Unexpected logouts**
stopped the service worker from force-reloading every open app on each deploy (which could drop the session); sessions now refresh reliably when the app returns to the foreground.
- **Coach Performance**
participants are now scoped by coach assignment (was showing 0 due to the old batch model).
- **Day / streak / proof-week**
now relative to each participant's own program start (fixed the wrong "Day 66" and broken streaks for new users).
- **Email OTP**
the login screen now expects the correct 6-digit code.
- **Habit tracker persistence**
water and steps now save correctly on refresh.
- **Invites**
fixed "Invite unavailable" appearing for every invite link.

2026-06-30

SECURITY & FIXES

- Moved the AI API key out of committed config into a Cloudflare secret.
- Fixed invite and test-email errors; added invite sharing, business-document import, and streaming AI advisor replies.
